END OF SEARCH HISTORY

These pages were devised to assist you in easily searching the designated core databases on "business-cryptography."

Dialog Toolkit uses a secure server

Search Page Capabilities:

- **Connection with Core Databases** - The guided search page automatically connects you with the core databases for this topic.
- **Background Search Strategy** - A comprehensive search strategy that brings together all documents on cryptography is running in the background allowing you to restrict your search to the specific claims in the patent application.
- **Easy Fill-in-the-Blank Searching** - You don't need to know commands and field codes to use the search pages. Just fill in your search term(s).

Full-Text or Abstract Databases:

Because different search capabilities are available in full-text databases and abstract databases, a guided search page has been created for each. Full-text databases allow you to display the full-text online. Abstract file records normally contain a citation and an abstract. Due to the large size of the full-text databases, they are separated into two groups.

In order to meet requirements for business methods non-patent literature searches, search ALL of the databases (Full-Text Databases-Group 1, Full-Text Databases-Group 2, and Abstract Databases).

To Begin Searching:

- ① [Guided Search: Full-Text Databases-Group 1](#)
- ② [Guided Search: Full-Text Databases-Group 2](#)
- ③ [Guided Search: Abstract Databases](#)
